1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as  $(N \times 200,000) / EH$  where:  
N = number of injuries and illnesses,  
EH = total hours worked by all employees during the calendar year, and  
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

N.R. = Non-respondent

---

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as  $(N \times 200,000) / EH$  where:  
 N = number of injuries and illnesses,  
 EH = total hours worked by all employees during the calendar year, and  
 200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

N.R. = Non-respondent

<b>City/Town</b>	<b>2022 Reported Employment</b>	<b>Total Recordable Cases</b>	<b>Cases with Days Away From Work</b>	<b>Cases with Job Transfer or Restriction</b>	<b>Other Recordable Cases</b>
------------------	---------------------------------	-------------------------------	---------------------------------------	---	-------------------------------

---

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as  $(N \times 200,000) / EH$  where:  
N = number of injuries and illnesses,  
EH = total hours worked by all employees during the calendar year, and  
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as (Nx200,000)/EH where:  
 N = number of injuries and illnesses,  
 EH = total hours worked by all employees during the calendar year, and  
 200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as  $(N \times 200,000) / EH$  where:  
N = number of injuries and illnesses,  
EH = total hours worked by all employees during the calendar year, and  
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as  $(N \times 200,000) / EH$  where:  
 N = number of injuries and illnesses,  
 EH = total hours worked by all employees during the calendar year, and  
 200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).
