Subject: Proposed Repower of Kay Wind Facility

Dear Mr. Galloway,

Southern Power owns and operates an existing wind power generating facility in Kay County, Oklahoma. The wind facility is Kay Wind Facility (130 turbines). Southern Power is planning to repower a portion of the turbines at this facility. As a part of this repowering process, Southern Power has submitted to the Federal Aviation Administration FAA form 7460-1 for the construction of the proposed repowers (ASNs 2024-WTW-8634-OE through 2024-WTW-8763-OE). Southern Power has received Determinations of No Hazards (DNH) from the FAA for all 130 turbine locations. Please see the attached list of FAA case numbers, table with structure details, and copies of Determinations of No Hazards.

While we submitted Form 7460-1 for all turbine locations and received determination of no hazards, only a portion of the facility will be repowered. A portion of the facility will remain as-is and a portion will be removed. Please see the updated project status column in the attached table for more details of the planned work at each turbine site. Kyle Johnson will serve as the point of contact for Southern Power. Please see my contact information below.

Sincerely,

Kyle Johnson
